

APPENDIX A - Pricing conditions

Appendix version	December 2024
Previous version	December 2023

This document is a translation of the French version of INIES programme rules. Only the original French version is authentic and official.

All declarants using the services of the declaration program for the verification of declarations or configurators must be registered with the INIES program. In particular, any declarant of a declaration bearing the “FDES Verified INIES” logo or of an “ICV verified INIES” module must be registered with the INIES program.

Before registering with the INIES program, a declarant must open an account on the INIES declaration platform.

Then, depending on the type and number of FDES/ICV/configurator to be declared, he proceeds to purchase at least one token (F1, F2) or an F3 or F4 package.

A.1 Registration of environmental declarations (FDES)

Registration in the INIES programme (obtaining a unique registration number also used for uploading to the database) of an environmental declaration requires the purchase of tokens (F1 or F2) or a subscription (F3). A token or subscription allows the registration of an FDES (F1 or F3), a mother FDES or reference ACV model (F2 or F3), or configured FDES (F1, F2 or F3).

A.2 Registration of a life cycle information (LCI) module (ICV)

Registration in the INIES programme (obtaining a unique registration number also used for uploading to the database) of an ICV requires the purchase of F1 tokens or a subscription.

A.3 Registration of a configurator (configurator owner, reference LCA model owner or declarant user of a configurator)

A3.1 Configurator owner

Registration of a configurator in the INIES programme requires the purchase of an F3 subscription or an F2 token per reference LCA model (or mother FDES) registered. These two options allow the owner of the configurator to deposit in INIES as many configured FDES as he wishes.

A3.2 Declarant user of a configurator already registered

A declarant user of a configurator and owner of some reference LCA models shall register all these reference LCA models (F2 token or F3 package).

A declarant who is a user of a configurator that has already been registered, who does not own the reference LCA models that he uses and who owns the declarations that he edits with this configurator, must pay a F4 package. He can then declare himself the user of an unlimited number of reference LCA models.

A.4 Individual tokens purchases

Fees	Amount (euros excluding VAT; 20% VAT)
F1	<p>220 euros/token for a purchase of 1 to 19 tokens 190 euros/token for a purchase of 20 tokens or more</p> <p>An F1 token allows to register an FDES, a configured FDES or an ICV. Registration of an FDES and an ICV for the same product requires two different F1 tokens.</p>
F2	<p>1,100 euros/token</p> <p>An F2 token allows to register a mother FDES and an unlimited number of Configured FDES from this mother FDES. It is valid for the validity period of the mother FDES.</p>

The tokens allow you to obtain a registration number for the programme and to request an online FDES/ICV. They can be used up to 1 year after their validation date by the INIES programme. Unused tokens are lost and will not give rise to any credit or refund. The registration numbers obtained remain valid for the duration of validity of the FDES or ICV. Registration numbers must be renewed with each complete major update of the FDES/ICV resulting in a reset of the validity period.

A.5 Subscription package for an unlimited number of recordings

A declarant can use this subscription package to register an unlimited number of declarations (FDES, mother FDES, configured FDES, ICV) or an unlimited number of reference LCA models uses. He undertakes to pay this subscription each year.

Package	Amount (euros excluding VAT; 20% VAT)
F3	3,200 euros / year as long as the declarant has an online FDES, ICV or configurator
F4	1,000 euros/year" as long as the declarant uses at least one reference LCA model

The F3 package is therefore invoiced every year as long as the declarant has FDES/ICV/configurators online in the INIES database. The declarant can switch back to F1 or F2 tokens whenever he wishes. On the expiry date of the F3 subscription, the declarant will then have to pay the number of F1 or F2 tokens corresponding to the online FDES/ICV/configurators. Otherwise, its data will be taken offline.

The F4 package is invoiced every year for as long as the declarant uses at least one reference LCA model.

A.6 Cost of creating a link from a mother or configured FDES to the configurator

If a declarant wishes to establish a link from a mother or configured FDES to the configurator he uses, the cost of creating a link when registering a configurator for the first time on the INIES database is invoiced at €2,000 excluding VAT.
